Real Website Analysis (Dodo Pizza — dodopizza.kz)

DOCTYPE: <!DOCTYPE html>

lang: "ru"

charset: UTF-8

viewport: width=device-width, initial-scale=1.0

title: Доставка пиццы в Астане — Додо Пицца

meta description: Быстрая доставка горячей пиццы, закусок и напитков в Астане.

meta author: Dodo Pizza Dev Team

meta keywords: pizza, delivery, astana, wedrink, food

Mistakes Analysis & Mitigation:

The target site skips heading levels (jumping directly from <h1> to <h3> or <h4>), breaking visual hierarchy for screen readers. The reference website relies heavily on generic <div class="header"> containers instead of standard HTML5 semantic landmarks like <header> and <nav>.

Task B — Reflection Essay

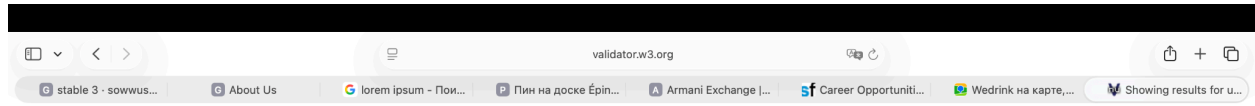

Creating the WEDRINK website using only HTML5, without CSS or JavaScript, helped me understand how important the basic structure of a website is. Before this assignment, I mostly thought of HTML as a tool for displaying text and images. However, while working on the project, I realized that HTML also helps organize information and make a website easier to understand.

In my project files, I tried to use semantic elements instead of using <div> for everything. For example, in index.html and menu.html, I used <section> and <article> to divide the content into different parts. These elements make the structure clearer and help browsers and assistive technologies

understand the purpose of each section. In colophon.html, I used `<pre>`, `<code>`, and `<kbd>` for technical information because they are more appropriate for showing code and specifications.

The order form in order.html also helped me understand how HTML forms work. Since JavaScript and backend scripts were not used, the browser automatically checks required fields and validates email and telephone formats. If everything is correct, the form submits using the default HTML method. However, because there is no server to process the information, the page simply reloads.

Overall, this assignment showed me that even plain HTML can create a meaningful and well-organized website.

Nu Html Checker

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change

Showing results for uploaded file menu.html (checked with vnu 26.9.9)

Checker Input

Show ☐ source ☐ outline ☐ image report ☐ errors & warnings only [Options...](#)

Check by

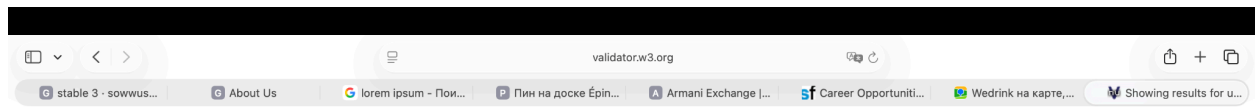

Uploaded files with .xhtml or .xht extensions are parsed using the XML parser.

[Check](#)

Document checking completed. No errors or warnings to show.

Used the HTML parser.
Total execution time 4 milliseconds.
